Note: Some flushing may also occur outside the highlighted area for hydrants installed during major watermain projects within the last three years.

Location details will be posted monthly in the Windsor Star and daily on Twitter and www.enwin.com.

*See reverse for more information.

About Hydrant Flow Testing

Why is Hydrant Flow Testing Necessary?

Hydrant flow testing removes sediment from the pipes, maintains water clarity and quality, and ensures adequate supply to fight fires.

What Can I Expect?

Mild discolouration and sedimentation may occur. This is normal and water is safe. Boiling water is not necessary.

What Should I Do?

While we are in your neighbourhood, please follow these recommendations:

- Avoid doing laundry until water runs clear.
- Wait until water is clear before drinking.
- Use only cold water until flushing is complete.
- When flow testing is complete in your area, run cold water through your interior faucets until clear.
- If discolouration lasts longer than 12 hours, please call ENWIN at 519-255-2727.
