

We're trimming trees in your neighbourhood.

Fallen tree branches cause *one out of every three* power outages in Windsor.

You might say that trees are the “root” cause, but it's no joke: Inclement weather can break tree branches, which may land on power lines, damage electrical equipment, and result in outages and other hazards. These scenarios create safety issues for you and our community.

To address this concern and protect our community's electrical infrastructure, ENWIN Utilities Ltd. has entrusted Davey Tree, professional arborists, to ensure the trees in your neighbourhood are safely clear of overhead power lines.

Davey Tree Trimming Program in Windsor.

Over the next three years, Davey Tree will be conducting tree trimming throughout the Windsor area. This year, their focus will be on **Area C**, shaded in the map above. Area C includes City of Windsor properties located east of Walker Road, south of Riverside Drive, north of the CP Railway and west of the City of Windsor boundaries.

If your property is located in Area C, Davey Tree may request access to your property to complete tree trimming. We kindly ask that you allow access, contributing to a safe and reliable electrical supply.

In some cases, for your safety and the safety of the tree-trimming team, ENWIN may need to turn off your power for a short while. If your service will be impacted, ENWIN will attempt to notify you in advance by phone with the outage date, time, and expected duration. You can ensure that your phone number is current (and make updates) by logging into your myENWIN account at www.enwin.com.

Crews from Davey Tree follow industry-best practices and have received extensive training in proper tree-trimming techniques. They will do their best to redirect growth away from power lines while protecting the health of your trees at the same time.

For more information, please call Davey at 519-739-1378. More information can also be found at www.daveytree.ca.
